

Watch. Earn. Own. A decentralised watch-to-earn video engagement platform built on the Stacks blockchain.

What is MOZOflix?

MOZOflix is the first watch-to-earn video platform on Stacks. It turns everyday video watching into a verifiable, rewarded on-chain activity — bridging Web2 habits with Web3 incentives.

Instead of platforms capturing all the value from viewer attention and selling it to advertisers, MOZOflix redistributes that value directly to viewers through automated smart contract reward distribution. Every verified watch event is recorded on the Stacks blockchain, creating a transparent and immutable engagement ledger that benefits viewers, creators, and the broader Web3 ecosystem.

The Problem

- Viewers watch billions of hours of content daily — and receive nothing in return
- Creators hand over audience data and revenue share to centralised platforms
- Web3 projects spend heavily on marketing with no verifiable proof of engagement
- Mainstream users have no low-friction entry point into blockchain ecosystems

The Solution

MOZOflix introduces a **creator-funded, viewer-rewarded** engagement model:

- Viewers connect their Stacks wallet, watch videos, and earn STX tokens for verified engagement
- Creators fund reward pools in STX, run campaigns, and receive on-chain proof of reach
- Web3 projects use MOZOflix as a performance-based content distribution channel

- Every interaction is recorded transparently on Stacks — no black boxes, no fake views
-

How It Works

1. Connect Wallet → Link your Leather or Xverse wallet (no email, no password)
2. Watch Content → Browse creator-funded videos and watch at least 70%
3. Earn STX Tokens → Rewards auto-distribute to your wallet via smart contracts

Reward eligibility threshold: 70% video completion **Anti-farming:** Background tab detection, session verification, wallet rate limiting

Core Features

For Viewers

- Wallet-native login (Leather, Xverse, Boom Wallet)
- Browse and watch short-form video content
- Earn STX tokens for verified engagement
- Personal earnings dashboard with transaction history
- Withdraw rewards anytime directly to your wallet

For Creators

- Upload video content with custom reward parameters
- Fund reward pools by depositing STX into smart contracts
- Real-time engagement analytics (watch duration, completion rate, unique wallets)
- Campaign management — pause, resume, top up, or close reward pools
- Withdraw unspent pool funds at any time
- On-chain proof of reach for sponsors and partners

For the Platform

- Watch engagement verification engine

- Automated Clarity smart contract reward distribution
- IPFS + cloud video hosting infrastructure
- On-chain event logging for all reward transactions
- Admin content moderation dashboard

Tech Stack

Layer	Technology
Blockchain	Stacks (Bitcoin L2)
Smart Contracts	Clarity
Frontend	React / Next.js
Backend	Node.js / Express
Database	Supabase (PostgreSQL)
Video Hosting	IPFS + Cloudflare CDN
Wallet Auth	Stacks Connect (Leather, Xverse)
Deployment	Vercel (frontend) · Railway (backend)

Smart Contract Overview

MOZOflix reward distribution is handled by a Clarity smart contract deployed on the Stacks blockchain.

```
;; Core contract functions

;; Creator deposits STX into reward pool for a video campaign
(define-public (fund-reward-pool (video-id uint) (amount uint)) ...)

;; Platform distributes rewards to viewer on verified completion
(define-public (distribute-reward (viewer principal) (video-id uint)) ...)

;; Record verified watch event on-chain
```

```
(define-public (record-watch-event (viewer principal) (video-id uint) (completion  
  
;; Creator withdraws unspent pool balance  
(define-public (withdraw-pool (video-id uint)) ...)
```

All contracts are deployed first on **Stacks testnet** before mainnet launch. Contract code will be open-sourced and audited prior to mainnet deployment.

MVP Scope (3 Months • \$5,000)

Month	Focus	Deliverable
Month 1	Platform Setup	Users can log in with Stacks wallet and watch videos
Month 2	Watch Tracking	Platform tracks, records, and verifies video engagement
Month 3	Rewards System	Users earn real STX tokens for verified content engagement

Budget Breakdown

Item	Cost
Frontend Development	\$1,800
Backend / Watch Tracking	\$1,400
Smart Contract Development	\$900
Infrastructure	\$500
Testing & QA	\$400
Total	\$5,000

Revenue Model

Stream	Description

Platform Fee	5–10% fee on all creator reward pool deposits
Creator Promotion	Featured placement on homepage and category pages
Premium Channels	STX micropayments or staking for exclusive content access
Partnership Campaigns	Web3 projects pay for managed educational content campaigns

Roadmap

Phase 1 — MVP (Months 1–3)

- Platform architecture and design
- Frontend video streaming interface
- Stacks wallet authentication
- Watch tracking and verification engine
- Clarity reward smart contract (testnet)
- User earnings dashboard
- Creator upload and campaign management
- Mainnet deployment

Phase 2 — Growth (Months 4–8)

- Engagement streak multipliers
- Referral reward system
- Campaign challenge mechanics
- Mobile-responsive PWA optimisation
- Expanded creator analytics suite
- Web3 project partnership programme

Phase 3 — Ecosystem (Months 9–18)

- Native mobile apps (iOS + Android)

- DAO governance framework
 - STX staking for premium content access
 - Decentralised IPFS content delivery network
 - Cross-platform identity and reward portability
 - Developer API for third-party integrations
-

Why Stacks?

MOZOflix is built on Stacks because no other blockchain offers the same combination of:

- **Bitcoin security** — All transactions settle to Bitcoin finality through Proof of Transfer
- **Clarity smart contracts** — Decidable, fully auditable contracts with no hidden behaviour
- **Consumer-friendly ecosystem** — Growing wallet ecosystem (Leather, Xverse, Boom) with low onboarding friction
- **Aligned mission** — Stacks is purpose-built for bringing real applications to Bitcoin

Every STX reward distributed by MOZOflix increases token velocity, drives new wallet creation, and contributes to network transaction activity — directly benefiting the Stacks ecosystem.

Benefits to the Stacks Ecosystem

- **Consumer onboarding** — Introduces Stacks wallets to non-technical users through familiar video experiences
- **STX token utility** — Every reward campaign creates direct STX demand and circulation
- **Educational media hub** — Natural home for blockchain and Web3 educational content
- **Decentralised creator economy** — Models equitable value distribution aligned with Web3 values

- **New dApp category** — Proves that consumer-grade, engagement-driven applications can thrive on Stacks
-

Anti-Farming & Security

MOZOflix takes reward integrity seriously. The platform employs a multi-layered defence strategy:

- **70% completion threshold** — Rewards only unlock after meaningful engagement
 - **Background tab detection** — Inactive tabs do not accumulate watch time
 - **Wallet rate limiting** — Limits on reward claims per wallet per time window
 - **Session verification** — Server-side cross-referencing of client watch events
 - **Future:** Proof-of-Personhood integration (BrightID / Worldcoin) for high-value pools
-

Getting Started (Development)

```
# Clone the repository
git clone https://github.com/mozoflix/mozoflix-app.git
cd mozoflix-app

# Install dependencies
npm install

# Set up environment variables
cp .env.example .env.local
# Add your Stacks API key, Supabase URL, and other config

# Run development server
npm run dev

# Deploy smart contracts to testnet
cd contracts
clarinet test
clarinet deploy --testnet
```

Environment Variables

```
NEXT_PUBLIC_STACKS_NETWORK=testnet
```

NEXT_PUBLIC_CONTRACT_ADDRESS=SP...
SUPABASE_URL=https://your-project.supabase.co
SUPABASE_ANON_KEY=your-anon-key
IPFS_GATEWAY=https://gateway.pinata.cloud
